GEO Audit Report

wa-channel-exporter.vercel.app

73/100

Good — GEO Readiness Score

Business Type: **Saas** • Pages Analyzed: **12** • Date: **2026-09-19 20:38:24**

Executive Summary

wa-channel-exporter.vercel.app (saas) has a **solid technical foundation** (server-side rendered, 6 security headers, clean URL structure) that makes it highly accessible to AI crawlers. However, the site underperforms in **Schema Markup** (22/100) and **AI Citability** (38/100). Content across 12 pages averages 360 words/page but citability scores only 38/100 — passages aren't structured for AI extraction. The weakest page (/google92f2800f9f926b73) scores just 0/100.

The biggest opportunity: The technical infrastructure is already strong enough to support AI visibility. The gap is in *how* content is structured — not in whether AI crawlers can reach it. 14 AI crawlers have access (including GPTBot, OAI-SearchBot, ChatGPT-User). Brand signals exist on Youtube, but Reddit and Wikipedia and LinkedIn presence is missing — Wikipedia is the single strongest entity recognition signal for AI models. Schema markup includes SoftwareApplication, AboutPage, HowTo, Article, but Organization schema is missing — critical for entity recognition.

Projected score after implementing priority actions: 91-99/100 (+18-26 points)

Priority actions: 1. Rewrite key page content with answer-first blocks of 134-167 words (+5-10 points) 2. Implement Organization schema with sameAs links (+5-8 points) 3. Fix 3 pages with H1 issues (+2-4 points) 4. Create Wikidata entity for brand recognition (+3-5 points) 5. Build organic Reddit presence in relevant subreddits (+2-4 points)

GEO Score Breakdown

The GEO score is a weighted composite of six key areas that determine how well your site performs in AI-powered search engines.

Formula: $GEO = [AI\ Citability(18\%) + Brand\ Authority(18\%) + Content\ E-E-A-T(22\%) + Technical\ SEO(20\%) + Schema\ Markup(10\%) + Platform\ Readiness(12\%)] \times 1.15 + \text{presence floor, capped at } 100 \rightarrow \mathbf{73/100}$

The six category scores are weighted and summed, then multiplied by a 1.15x calibration factor. Sites clearing 25/100 in at least two categories also receive a presence floor of up to 15 points. Both adjustments are why the headline number is higher than the weighted sum alone — read the six category scores to decide what to fix.

CATEGORY	WEIGHT	SCORE	GRADE
AI Citability	18%	38/100	Poor
Brand Authority	18%	40/100	Poor
Content E-E-A-T	22%	55/100	Fair
Technical SEO	20%	83/100	Good
Schema Markup	10%	22/100	Critical
Platform Readiness	12%	46/100	Poor

AI Platform Readiness Scores

How well your site is optimized for each major AI search platform.

PLATFORM	SCORE	READINESS
Google AI Overviews	46/100	Moderate
ChatGPT Web Search	44/100	Moderate
Perplexity AI	42/100	Moderate
Google Gemini	50/100	Moderate
Bing Copilot	48/100	Moderate

Key Metrics at a Glance

A summary of the most important quantitative signals found across your site.

Content Metrics

Metric	Value	Assessment
Pages Analyzed	12	Sufficient sample size
Average Words per Page	360	Moderate — consider expanding key pages
Average Citability Score	38/100	Poor
Total Images	6	—
Alt Text Coverage	100%	Excellent

Link Structure

Metric	Value
Avg Internal Links per Page	6
Avg External Links per Page	2
Pages with H1 Issues	3

Structured Data & AI Discoverability

Metric	Value
Schema Types Found	SoftwareApplication, AboutPage, HowTo, Article
llms.txt File	Found

E-E-A-T Analysis

E-E-A-T (Experience, Expertise, Authoritativeness, Trustworthiness) is Google's quality framework. AI search engines heavily weight these signals when deciding which content to cite. Your combined E-E-A-T score is **55/100** (Fair).

PILLAR	SCORE	MAX	EVIDENCE SIGNALS
Experience	4	/25	Avg 360 words/page (thin content)
Expertise	20	/25	Author / Person schema detected; 6 H2 subheadings (structured expertise)
Authoritativeness	12	/25	6 outbound authority links; About / Team page found
Trustworthiness	20	/25	HTTPS enabled; 6 security headers present; Privacy / Terms page found; Contact / Support page found

What This Means

- Experience** measures first-hand knowledge signals — case studies, original data, user testimonials.
- Expertise** evaluates depth of subject-matter coverage — author credentials, technical accuracy, comprehensive explanations.
- Authoritativeness** assesses domain recognition — backlinks from authoritative sources, brand mentions, industry citations.
- Trustworthiness** looks at credibility signals — HTTPS, privacy policies, contact information, editorial standards.

AI Crawler Access

AI search engines use crawlers to index your content. Blocking these crawlers means your content cannot appear in AI-generated answers. Out of 14 crawlers checked: **14 allowed**, **0 blocked**, 0 not mentioned in robots.txt.

CRAWLER	STATUS	IMPLICATION
GPTBot	Allowed	Content can appear in this platform's AI answers
OAI-SearchBot	Allowed	Content can appear in this platform's AI answers
ChatGPT-User	Allowed	Content can appear in this platform's AI answers
ClaudeBot	Allowed	Content can appear in this platform's AI answers
PerplexityBot	Allowed	Content can appear in this platform's AI answers
Google-Extended	Allowed	Content can appear in this platform's AI answers
GoogleOther	Allowed	Content can appear in this platform's AI answers
Applebot-Extended	Allowed	Content can appear in this platform's AI answers
Amazonbot	Allowed	Content can appear in this platform's AI answers
FacebookBot	Allowed	Content can appear in this platform's AI answers
CCBot	Allowed	Content can appear in this platform's AI answers
anthropic-ai	Allowed	Content can appear in this platform's AI answers
Bytespider	Allowed	Content can appear in this platform's AI answers
cohere-ai	Allowed	Content can appear in this platform's AI answers

Key Findings (11 total)

Issues discovered during the audit, organized by severity. Critical and High severity items should be addressed first as they have the greatest impact on your AI search visibility.

CRITICAL (3)

FINDING	DESCRIPTION	EFFORT
Duplicate Opening Paragraphs Cause Citation Cannibalization	The homepage, /download-media, and /export-to-pdf share nearly identical 50+ word openings referencing WAnalysis and WAExport. When generative engines crawl these pages, they cannot determine a single canonical source to cite, so citation probability is split and diluted across all three URLs.	low
Organization & SameAs Schema Completely Missing	schema_found.has_organization and schema.has_sameas are both false, yet the site has a YouTube presence and a public GitHub repository. Without Organization schema linking these entities via SameAs, AI knowledge graphs cannot verify brand identity or attribute authority signals back to the domain.	low
FAQ Content Lacks FAQPage Structured Data	The homepage contains an H2 'Frequently Asked Questions' section with direct answers, but schema_found lists only SoftwareApplication, AboutPage, HowTo, and Article types. Missing FAQPage schema prevents Google AIO and Bing Copilot from surfacing these answers as rich citation blocks.	low

HIGH (4)

FINDING	DESCRIPTION	EFFORT
Zero Date Metadata Across Core Content Pages	No published, modified, or last-reviewed dates appear in headings, meta, or schema. Perplexity and Gemini weight freshness heavily for software-tool queries, and undated technical documentation is often deprioritized in favor of newer sources.	low
Absence of Comparison Tables and Data Structures	No HTML tables or structured comparisons were detected across the 12 analyzed pages. Google AIO assigns significant value to table markup for feature-comparison snippets, and generative engines rely on tabular data to summarize product capabilities against competitors.	medium
Thin Citability Scores Across All Landing Pages	Every tracked page scores between 48 and 56 on citability with an average word count of only ~360 words. AI engines select dense, self-contained passages for citation; the current thin content limits the probability of any single block being chosen as a primary source.	high

No Reddit or Forum Presence for Perplexity Validation	brand_presence.reddit is false and no forum mentions were detected. Perplexity allots 20 points to Reddit presence alone and uses forum validation as a trust signal; lacking these references puts the tool at a severe disadvantage against competitors that have community discussion.	high
--	---	------

MEDIUM (2)

FINDING	DESCRIPTION	EFFORT
Author Byline and Expertise Signals Absent	No individual author or organizational byline appears on documentation, support, or HowTo pages. Both Gemini and Google AIO require clear attribution—especially for software handling private user data—so the absence of an attributable expert weakens EEAT extraction.	low
Unnecessary Verification Files Consume Crawl Attention	/google92f2800f9f926b73 and two Yandex verification files return zero content value. While AI bots are allowed to crawl them, these pages offer no topical reinforcement and siphon crawl equity away from high-intent landing pages.	low

LOW (2)

FINDING	DESCRIPTION	EFFORT
LLMs.txt Properly Implemented and Accessible	llms.txt_status exists and is valid. This foundational GEO signal helps LLM crawlers understand site structure and permissible content use, increasing the odds of ethical ingestion and accurate citation.	low
All Major AI Crawlers Granted Access	GPTBot, OAI-SearchBot, PerplexityBot, ClaudeBot, Google-Extended, and others are all explicitly allowed. Maintaining this permissive stance is essential for inclusion in generative search citations and should be preserved during future robots.txt updates.	low

Prioritized Action Plan

Recommended actions organized by implementation timeline. Quick wins can be done immediately with minimal effort. Medium-term actions require more planning. Strategic initiatives are long-term investments.

Citability Analysis

Citability measures how likely AI systems are to quote or reference your content in their answers. A score of 70+ means your content is structured in ways that AI models prefer to cite. Your average score across 12 pages is **38/100** (Poor).

Highest Scoring Pages

PAGE URL	SCORE	GRADE
/documentation	56/100	Fair
/terms-of-service	55/100	Fair
/about	53/100	Poor
/privacy-policy	53/100	Poor
/support	52/100	Poor

Lowest Scoring Pages (Priority for Improvement)

PAGE URL	SCORE	GRADE
/google92f2800f9f926b73	0/100	Critical
/yandex_3959f89b45a6c6ae	0/100	Critical
/yandex_678028a3ee696b36	0/100	Critical
/	48/100	Poor
/download-media	48/100	Poor

Top Citation-Ready Content Blocks

These are specific content sections that AI models are most likely to cite directly.

BLOCK / HEADING	SCORE	ANSWER	SELF-CONT.	STRUCTURE	STATS	UNIQUE
What is WA Channel Exporter? <i>"The WA Channel Exporter is a privacy-first Google Chrome extension designed spec..."</i>	74	82	88	80	43	52
How to download WhatsApp Channel history <i>"If you are searching for how to download WhatsApp Channel history, standard chat..."</i>	68	82	88	72	18	47

Technical SEO Breakdown

Technical SEO ensures search engines (both traditional and AI-powered) can crawl, render, and understand your site. Each category below is scored independently.

CATEGORY	SCORE	MAX	STATUS
Crawlability	15	15	PASS
Indexability	8	12	WARN
Security	10	10	PASS
URL Structure	8	8	PASS
Mobile	4	6	WARN
Core Web Vitals	15	15	PASS
Server-Side Rendering	15	15	PASS
Page Speed	8	12	WARN

Indexability — Failed Checks

CHECK	DETAILS	POINTS LOST
Title tag optimized	Title: "WA Channel Exporter Download WhatsApp Channel Messages & Media" (64 chars)	-2
Meta description	Missing or too long	-2

Technical Findings

SEVERITY	FINDING	DESCRIPTION
LOW	Core Web Vitals are estimated	CWV scores (LCP, INP, CLS) are estimated from HTML heuristics, not Chrome UX Report field data. Use PageSpeed Insights or CrUX API for accurate measurements.

Heading Structure Issues (7)

Proper heading hierarchy (H1 → H2 → H3) helps both users and AI systems understand your content structure. The following issues were found.

SEVERITY	ISSUE	PAGE
HIGH	Missing H1 tag	/google92f2800f9f926b73
LOW	Skipped heading level: H4 used without H3	/privacy-policy
MEDIUM	No H2 subheadings despite substantial content	/support
LOW	Skipped heading level: H3 used without H2	/support
LOW	Skipped heading level: H4 used without H3	/terms-of-service
HIGH	Missing H1 tag	/yandex_3959f89b45a6c6ae
HIGH	Missing H1 tag	/yandex_678028a3ee696b36

Brand Authority Analysis

AI models build entity understanding from brand mentions across high-authority platforms. A strong brand presence on these platforms increases the likelihood that AI will recognize, trust, and cite your content. Brand searched: **vercel**.

PLATFORM	PRESENT	SCORE	WEIGHT	DETAILS
YouTube	Yes	60/100	25%	Brand found in YouTube search results (no dedicated channel detected)
Reddit	No	0/100	25%	No Reddit presence detected
Wikipedia	No	0/100	20%	No Wikipedia or Wikidata presence found
LinkedIn	No	35/100	15%	LinkedIn cannot be verified automatically (anti-bot protection) — assumed baseline presence. Verify manually for accurate score.
Others (GitHub)	Yes	60/100	15%	GitHub: 5 repo(s) found — also verify Quora, Stack Overflow, G2, Trustpilot manually

Brand Recommendations

1. Create a dedicated YouTube channel with @handle matching brand name
2. Participate authentically in relevant subreddits
3. Avoid promotional content — be helpful and specific
4. Assess notability criteria for Wikipedia article creation
5. Create a Wikidata item with key properties (instance of, official website, social media)
6. Ensure complete LinkedIn company page with accurate description

Schema & Structured Data

Schema markup helps AI systems understand the type and context of your content. JSON-LD is the preferred format for both Google and AI search engines.

METRIC	VALUE	ASSESSMENT
Format	json-ld	Optimal format
Server Rendered	Yes	AI crawlers can access it
Detected Schema Types	1	—
Missing Recommended	3	Action needed

Detected Schema Types

TYPE	VALID
SoftwareApplication	Valid

Missing Recommended Schemas

The following schema types are recommended for your site type but were not found:

- **Organization**
- **WebSite + SearchAction**
- **BreadcrumbList**

sameAs Links (Entity Linking)

sameAs links in your Organization schema help AI models connect your brand across platforms.

PLATFORM	STATUS
wikipedia	Missing — add to Organization schema
wikidata	Missing — add to Organization schema
linkedin	Missing — add to Organization schema
youtube	Missing — add to Organization schema
twitter	Missing — add to Organization schema
github	Missing — add to Organization schema
crunchbase	Missing — add to Organization schema

llms.txt Status

llms.txt is an emerging standard (like robots.txt) that helps AI systems understand your site structure and preferred content for citation.

CHECK	RESULT
File Exists	Yes
Valid Format	Yes
Score	80/100

Per-Page Citability Analysis (12 pages)

Each page is scored on 5 dimensions that determine how likely AI systems are to cite it: Answer Quality, Self-Containment, Structure, Statistical Density, and Uniqueness.
